CAN YOU FIND SEVEN DIFFERENCES BETWEEN THESE TWO PICTURES?

## HAIRLESS HORSES!?!?

You may have heard of hairless dogs or cats... but did you know that hairless horses exist. Well, it's true. Some horses are born with hair and then go bald. Others are simply born without any hair! Isn't that unusual.

Nobody seems to know why hairless horses exist. Usually having a hairless horse comes as a shock to its owner. However, there are myths that some people are known to try to breed for this trait.

Very few hairless horses are around. Even a smaller number get the chance to live a full and healthy life. Pictured are a hairless palomino foal with her mom that is hairy and healthy. Also pictured is Harry one of the few hairless horses that is mature, healthy, and happy.

For more information, try googling hairless horses on your own.
